

CSS Attributes Cheat-Sheet

A quick reference with syntax & mini-example.

color

Syntax:

```
selector {  
  color: value;  
}
```

Example:

```
p {  
  color: #333333;  
}
```

What it does: Sets the text color of the selected element.

background-color

Syntax:

```
selector {  
  background-color: value;  
}
```

Example:

```
div {  
  background-color: #f0f0f0;  
}
```

What it does: Sets the background color of the selected element.

font-size

Syntax:

```
selector {  
  font-size: value;  
}
```

Example:

```
h2 {  
  font-size: 2em;  
}
```

What it does: Sets the size of the font for the selected element.

font-family

Syntax:

```
selector {  
  font-family: value;  
}
```

Example:

```
body {  
  font-family: Arial, sans-serif;  
}
```

What it does: Sets the font family for the selected element.

font-weight

Syntax:

```
selector {  
  font-weight: value;  
}
```

Example:

```
strong {  
  font-weight: bold;  
}
```

What it does: Sets the thickness of the font.

font-style

Syntax:

```
selector {  
  font-style: value;  
}
```

Example:

```
em {  
  font-style: italic;  
}
```

What it does: Sets the style of the font (normal, italic, oblique).

text-align

Syntax:

```
selector {  
  text-align: value;  
}
```

Example:

```
h1 {  
  text-align: center;  
}
```

What it does: Aligns the text horizontally within its container.

text-decoration

Syntax:

```
selector {  
  text-decoration: value;  
}
```

Example:

```
a {  
  text-decoration: underline;  
}
```

What it does: Adds decoration to text (underline, overline, line-through, none).

text-transform

Syntax:

```
selector {  
  text-transform: value;  
}
```

Example:

```
h2 {  
  text-transform: uppercase;  
}
```

What it does: Controls capitalization of text.

letter-spacing

Syntax:

```
selector {  
  letter-spacing: value;  
}
```

Example:

```
p {  
  letter-spacing: 2px;  
}
```

What it does: Sets the space between characters.

line-height

Syntax:

```
selector {  
  line-height: value;  
}
```

Example:

```
p {  
  line-height: 1.5;  
}
```

What it does: Sets the height of each line of text.

word-spacing

Syntax:

```
selector {  
  word-spacing: value;  
}
```

Example:

```
p {  
  word-spacing: 10px;  
}
```

What it does: Sets the space between words.

background-image

Syntax:

```
selector {  
  background-image: url('image.jpg');  
}
```

Example:

```
body {  
  background-image: url('bg.png');  
}
```

What it does: Sets an image as the background.

background-repeat

Syntax:

```
selector {  
  background-repeat: value;  
}
```

Example:

```
body {  
  background-repeat: no-repeat;  
}
```

What it does: Controls if/how the background image repeats.

background-position

Syntax:

```
selector {  
  background-position: value;  
}
```

Example:

```
body {  
  background-position: center top;  
}
```

What it does: Sets the starting position of a background image.

background-size

Syntax:

```
selector {  
  background-size: value;  
}
```

Example:

```
body {  
  background-size: cover;  
}
```

What it does: Specifies the size of the background image.

border

Syntax:

```
selector {  
  border: width style color;  
}
```

Example:

```
div {  
  border: 1px solid #000;  
}
```

What it does: Sets the border around an element.

border-radius

Syntax:

```
selector {  
  border-radius: value;  
}
```

Example:

```
img {  
  border-radius: 50%;  
}
```

What it does: Rounds the corners of an element.

border-color

Syntax:

```
selector {  
  border-color: value;  
}
```

Example:

```
table {  
  border-color: #ccc;  
}
```

What it does: Sets the color of the border.

border-width

Syntax:

```
selector {  
  border-width: value;  
}
```

Example:

```
hr {  
  border-width: 2px;  
}
```

What it does: Sets the width of the border.

border-style

Syntax:

```
selector {  
  border-style: value;  
}
```

Example:

```
div {  
  border-style: dashed;  
}
```

What it does: Sets the style of the border (solid, dashed, dotted, etc.).

margin

Syntax:

```
selector {  
  margin: value;  
}
```

Example:

```
section {  
  margin: 20px;  
}
```

What it does: Sets the outer space around an element.

margin-top

Syntax:

```
selector {  
  margin-top: value;  
}
```

Example:

```
h1 {  
  margin-top: 40px;  
}
```

What it does: Sets the top margin of an element.

margin-right

Syntax:

```
selector {  
  margin-right: value;  
}
```

Example:

```
h1 {  
  margin-right: 10px;  
}
```

What it does: Sets the right margin of an element.

margin-bottom

Syntax:

```
selector {  
  margin-bottom: value;  
}
```

Example:

```
h1 {  
  margin-bottom: 30px;  
}
```

What it does: Sets the bottom margin of an element.

margin-left

Syntax:

```
selector {  
  margin-left: value;  
}
```

Example:

```
h1 {  
  margin-left: 15px;  
}
```

What it does: Sets the left margin of an element.

padding

Syntax:

```
selector {  
  padding: value;  
}
```

Example:

```
div {  
  padding: 10px 20px;  
}
```

What it does: Sets the inner space between content and border.

padding-top

Syntax:

```
selector {  
  padding-top: value;  
}
```

Example:

```
div {  
  padding-top: 5px;  
}
```

What it does: Sets the top padding of an element.

padding-right

Syntax:

```
selector {  
  padding-right: value;  
}
```

Example:

```
div {  
  padding-right: 15px;  
}
```

What it does: Sets the right padding of an element.

padding-bottom

Syntax:

```
selector {  
  padding-bottom: value;  
}
```

Example:

```
div {  
  padding-bottom: 8px;  
}
```

What it does: Sets the bottom padding of an element.

padding-left

Syntax:

```
selector {  
  padding-left: value;  
}
```

Example:

```
div {  
  padding-left: 12px;  
}
```

What it does: Sets the left padding of an element.

width

Syntax:

```
selector {  
  width: value;  
}
```

Example:

```
img {  
  width: 100px;  
}
```

What it does: Sets the width of an element.

min-width

Syntax:

```
selector {  
  min-width: value;  
}
```

Example:

```
div {  
  min-width: 200px;  
}
```

What it does: Sets the minimum width of an element.

max-width

Syntax:

```
selector {  
  max-width: value;  
}
```

Example:

```
img {  
  max-width: 100%;  
}
```

What it does: Sets the maximum width of an element.

height

Syntax:

```
selector {  
  height: value;  
}
```

Example:

```
img {  
  height: 80px;  
}
```

What it does: Sets the height of an element.

min-height

Syntax:

```
selector {  
  min-height: value;  
}
```

Example:

```
div {  
  min-height: 100px;  
}
```

What it does: Sets the minimum height of an element.

max-height

Syntax:

```
selector {  
  max-height: value;  
}
```

Example:

```
img {  
  max-height: 300px;  
}
```

What it does: Sets the maximum height of an element.

display

Syntax:

```
selector {  
  display: value;  
}
```

Example:

```
nav {  
  display: flex;  
}
```

What it does: Specifies how an element is displayed (block, inline, flex, grid, etc.).

position

Syntax:

```
selector {  
  position: value;  
}
```

Example:

```
header {  
  position: fixed;  
}
```

What it does: Specifies the positioning method (static, relative, absolute, fixed, sticky).

top

Syntax:

```
selector {  
  top: value;  
}
```

Example:

```
header {  
  top: 0;  
}
```

What it does: Sets the top position of a positioned element.

right

Syntax:

```
selector {  
  right: value;  
}
```

Example:

```
aside {  
  right: 10px;  
}
```

What it does: Sets the right position of a positioned element.

bottom

Syntax:

```
selector {  
  bottom: value;  
}
```

Example:

```
footer {  
  bottom: 0;  
}
```

What it does: Sets the bottom position of a positioned element.

left

Syntax:

```
selector {  
  left: value;  
}
```

Example:

```
aside {  
  left: 20px;  
}
```

What it does: Sets the left position of a positioned element.

z-index

Syntax:

```
selector {  
  z-index: value;  
}
```

Example:

```
.modal {  
  z-index: 1000;  
}
```

What it does: Sets the stack order of a positioned element.
